

Installing Visual Studio Code and Connecting it with Anaconda

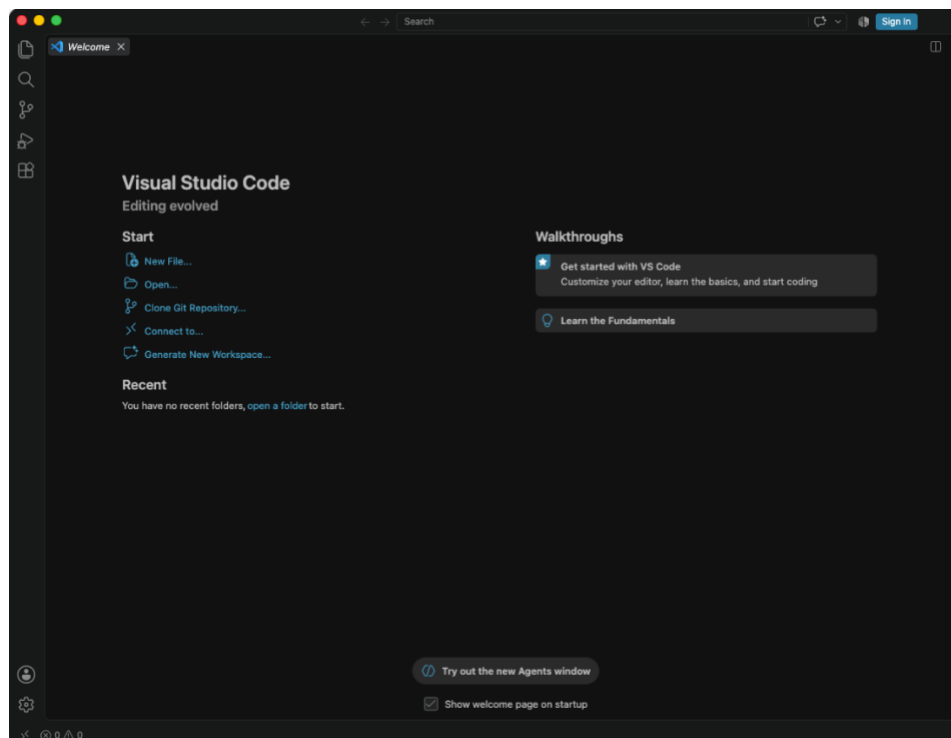

1. Go to the [Visual Studio Code Website](https://code.visualstudio.com/) and select your operating system (Windows, Mac, etc.)

Download Visual Studio Code

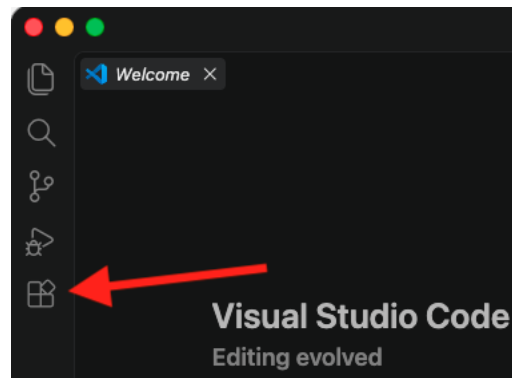

Free and built on open source. AI agents, Git, debugging, and extensions included.

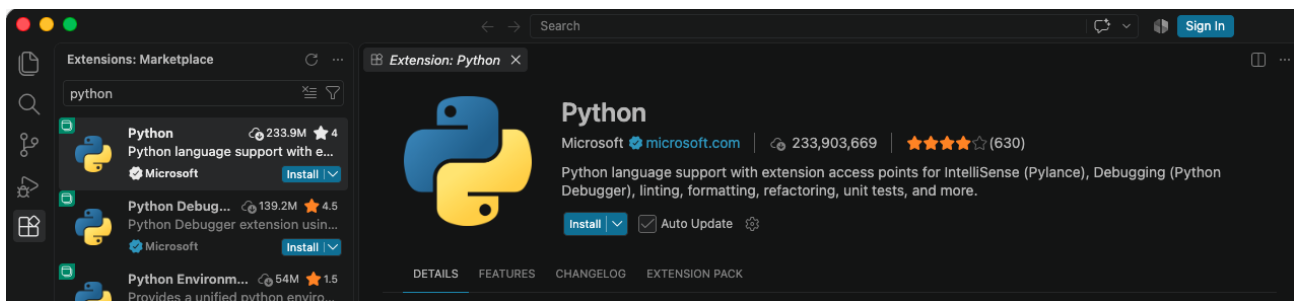

2. Download and run the VS code executable to install the Visual Studio Code application on your computer.
3. Open the VS code application. You will see a window like this:

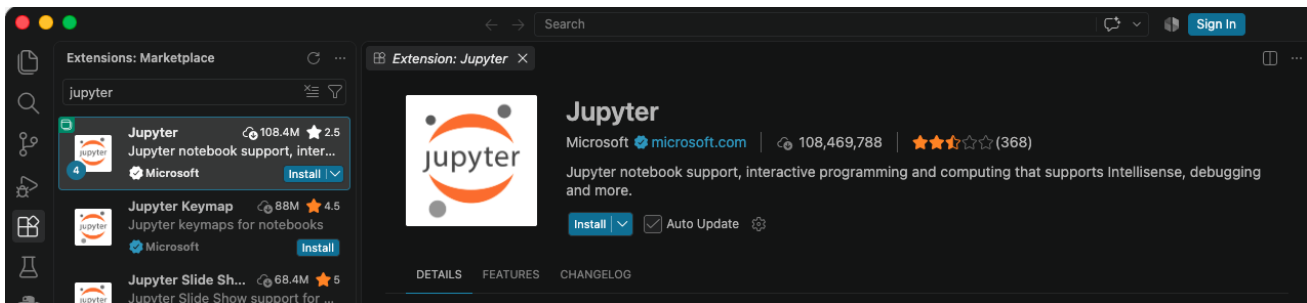

4. Click on the “Extensions” icon on the left-hand side of the screen:

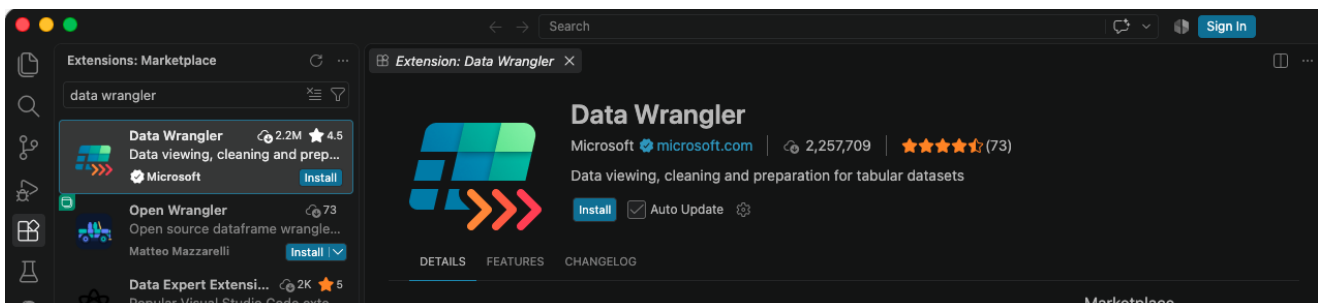

5. Type “python” in the Extensions search bar and install the Python extension:

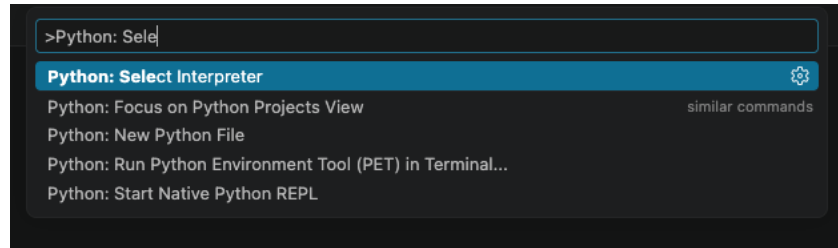

6. Type “jupyter” in the Extensions search bar and install the Jupyter extension:

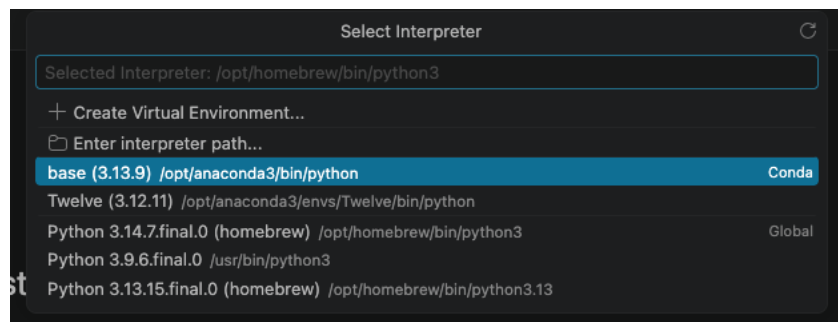

7. Type “data wrangler” in the Extensions search bar and install the Data Wrangler extension

8. Go to the search bar at the very top of the VS code window. Type the “>” character, and begin typing “Python: Select Interpreter”. Select that option

9. You will most likely have multiple Python interpreters on your computer. If VS code recognizes Anaconda, you will see the “base” option. The word “Conda” will appear off to the right:

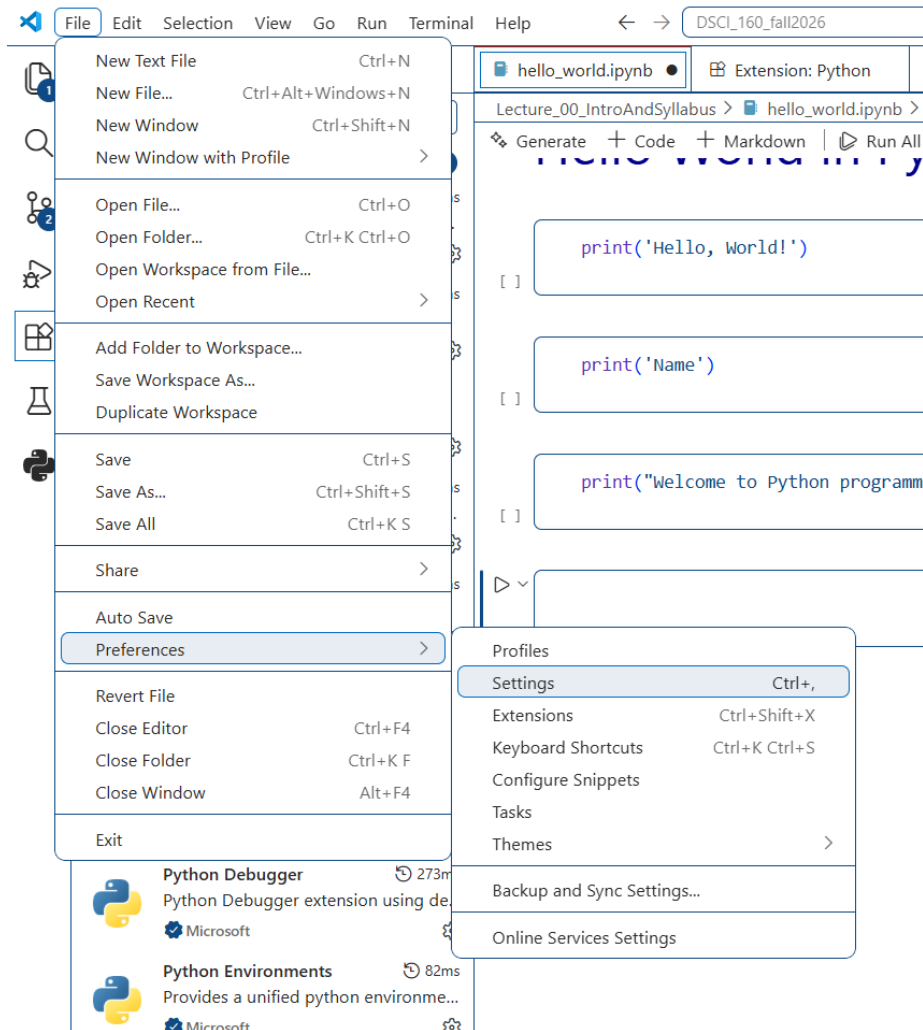

10. We will check that the connection is working when we cover Jupyter notebooks during lecture.

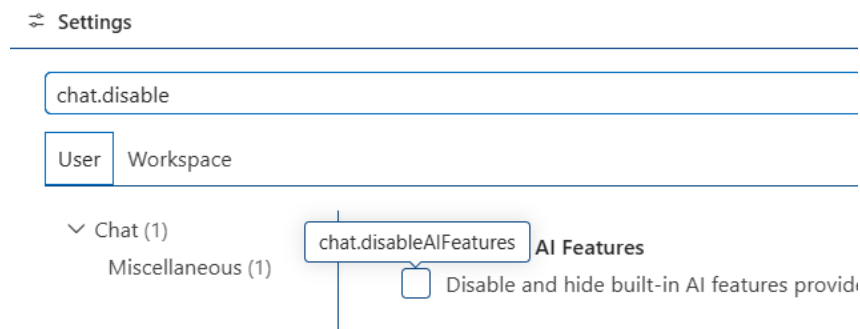

Disabling AI

VS Code now ships with AI tools automatically enabled. You may need to disable AI through the settings if there is no extension you can disable.

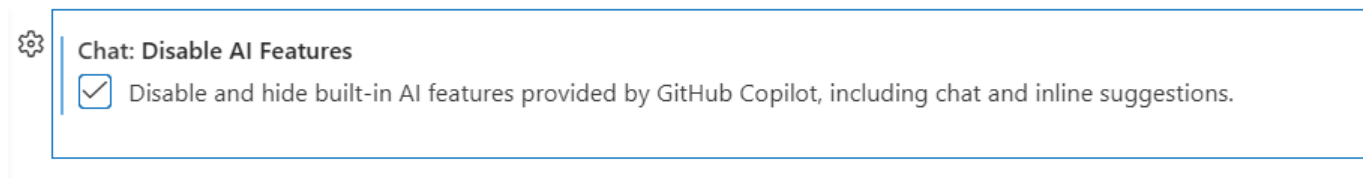

1. Open VS Code Settings

2. Search for “chat.disableAIFeatures”

3. Check the box to disable AI

4. This may make an extension show up in your VS Code extensions. Make sure you keep this extension disabled. Unfortunately, it cannot be uninstalled. It should look like this when you click on the gear icon of the extension:
